PROFILE

Experienced IT professional with 6+ years in the industry, covering software development, manual QA, and test automation across web and mobile platforms. Strong background in delivering full-stack features, improving software quality through structured testing, and building reliable automation projects using modern tools such as Playwright and Appium.

EDUCATION

2016-2021 Queen's University Belfast

- Bachelor of Science in Computing & IT with a Year in Industry

2009-2016 St Joseph's Boys' School, Derry

- A-Level Engineering: **A***, A-Level ICT: **B**, A-Level Business Studies: **B**
- 8 GCSEs Grades (A-C), including English, Mathematics & Science

EMPLOYMENT HISTORY

Software Developer / QA Engineer, WorkPal Belfast

JULY 2021 – PRESENT

QA Engineer Responsibilities

- Performed manual testing across web, iOS, and Android applications to ensure consistent product quality across releases.
- Designed and executed test cases, test plans, and exploratory testing to improve coverage and defect detection.
- Conducted functional, regression, UAT, and exploratory testing across multiple environments.
- Logged, tracked, and verified bugs in collaboration with developers to ensure timely resolution.
- Developed and maintained automated UI, visual, and regression test suites using Playwright and Testsigma.
- Built mobile automation frameworks using Appium for Android and iOS testing.
- Implemented and maintained PHPUnit test coverage for REST APIs alongside manual testing, improving reliability and reducing regressions.
- Developed reusable test utilities including authentication workflows, email validation, database fixtures, and import/export tooling to improve automation efficiency.
- Worked closely with product and development teams to ensure consistent cross-platform user experience.

Software Developer Responsibilities

- Developed and maintained backend functionality using PHP and MySQL for a work management platform.
- Built and enhanced frontend features using JavaScript to improve usability and system performance.
- Designed and executed API testing workflows using Postman, supporting system reliability prior to QA integration.
- Implemented custom forms, reporting tools, and workflow features based on business requirements.
- Contributed to full-stack feature development, bug fixing, and ongoing system improvements.
- Reviewed code and collaborated with developers to improve maintainability and reduce defects.

IT Support Roles, Queen's University Belfast

AUGUST 2019 – JULY 2022

User Support Technician

- Provided Tier 1 IT support to staff and students across multiple university systems and services.
- Processed 100+ weekly support requests covering hardware, software, and account-related issues.
- Diagnosed and resolved technical issues across desktops, applications, and user accounts.
- Installed, configured, and maintained software and hardware across staff workstations.
- Assisted users with malware and security-related issues, ensuring system integrity and recovery.
- Improved support workflows to increase consistency and efficiency of service delivery.
- Created and maintained internal support documentation and web resources.
- Communicated technical solutions clearly to non-technical users across all levels.

Computer Assistant Placement

- Assisted in hardware and software assessments to improve system performance and reliability.
- Supported end users with troubleshooting and guided them through technical resolution steps.
- Installed and tested hardware components including motherboards, CPUs, and GPUs.
- Imaged, configured, and deployed systems across organisational networks.
- Maintained and refurbished IT equipment including PCs, monitors, printers, and peripherals.
- Explained technical concepts clearly to non-technical users.

PROJECTS

Protaskinate – Project & Task Management Platform

- Developed a full-stack project and ticket management platform using Laravel and React.
- Built task boards for managing projects, tickets, subtasks, and assignments.
- Implemented time tracking, prioritisation, file uploads, and progress monitoring features.
- Designed RESTful APIs and integrated frontend components with backend services.
- Delivered responsive UI components to improve usability and workflow efficiency.

Dynamic Form Builder Web Application

- Developed a Laravel-based web application allowing users to create and manage dynamic forms.
- Implemented authentication and role-based access control.
- Designed scalable database structures for dynamic form generation and data storage.
- Focused on reusable components and maintainable architecture.

Student Management System

- Created a student management platform using Laravel for handling student records and administration.
- Implemented CRUD functionality, authentication systems, and database management features.
- Designed responsive interfaces for efficient data management and user interaction.

Additional Development Projects

- Developed multiple full-stack web applications using PHP, JavaScript, SQL, HTML, and CSS.
- Created React-based dashboard and social media interface projects with responsive UI design.
- Built and maintained WordPress and BigCommerce websites.
- Developed database-driven systems featuring booking systems, review systems, and reporting functionality.

INTERESTS & HOBBIES

- Personal software development projects using Laravel, React, and modern web technologies.
- Exploring automation testing frameworks & development tools to improve workflow efficiency and code quality.
- Keeping up to date with developments in web technologies, UI/UX design principles, and software engineering best practices.
- Playing football regularly with my local club.
- Going to the gym moderately, focussing on fitness.
- Cooking and experimenting with different recipes.
- Spending time outdoors, including walking and general outdoor activities.
- Gaming, watching TV Shows & Movies.
